永久关闭win10系统更新脚本代码如下

```
Const usosvc_reg = "HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\usosvc"  
Set fso = createobject("scripting.filesystemobject")  
Set shell = createobject("wscript.shell")  
curdir = fso.getparentfoldername(wscript.scriptfullname)
```

```
If wscript.arguments.count = 0 Then  
Set sh = createobject("shell.application")  
sh.shellexecute wscript.fullname, "" & wscript.scriptfullname & "" -admin,, "runas"  
Elseif wscript.arguments.count = 1 And wscript.arguments(0) = "-admin" Then  
run  
Else  
msgbox "脚本启动参数错误!"  
End If
```

```
Sub Run()  
Do  
ret = inputbox("1. 禁止Win10自动更新;" & vbcrlf & _  
"2. 恢复Win10自动更新;" & vbcrlf & _  
vbcrlf & _  
"请输入序号:", "管理Win10自动更新v3", "1")  
Select Case ret  
Case "1"  
retnum = shell.run("sc.exe stop usosvc", 0, True)  
shell.regwrite usosvc_reg & "\WOW64", &H14c, "REG_DWORD"  
msgbox "已禁止Win10自动更新!", vbexclamation  
Exit Do  
Case "2"  
shell.regdelete usosvc_reg & "\WOW64"  
retnum = shell.run("sc.exe start usosvc", 0, True)  
msgbox "已恢复Win10自动更新!", vbexclamation
```

```
Exit Do
Case ""
Exit Do
Case Else
msgbox "输入错误!请重新输入!",vbcritical
End Select
Loop
End Sub
```

如上脚本复制到文本编辑器，编码改成ANSI 后缀改成vbs，使用管理员权限执行

值为1 关闭win10自动更新，值为2 恢复win10自动更新
