

8 层功力的 remnote 制卡 并多多一键制卡更新，支持列表项制卡，增加一键移除

作者: [zxhd86](#)

需要了解是什么参见[并夕夕版 文档树制卡 v0.5 支持直接获取路径和分屏](#)，演示见下：

列表项制卡的符号参考了remnote，也就是》》和>>。要是有什么容易打出来也不大可能有其他用、而且好看的符号也可以提，当然更欢迎自行添加。

另外，由于接口的限制，暂时没办法移除使用快捷键添加的卡片——因为获取不到ALL卡包。

喜欢的话留个言，也让我知道除我以外还有人用。

```
// 一键移除卡片 v0.1
// 请求函数
// 使用匿名函数，防止污染空间
(() => {

  function request(url, data = null, method = "POST") {
    return new Promise((resolve, reject) => {
      if (method.toUpperCase() === "POST") {
        fetch(url, {
          method: "POST",
          headers: { "Content-Type": "application/json" },
          body: JSON.stringify(data),
        })
          .then(
            (data) => resolve(data.json()),
            (error) => {
              reject(error);
            }
          )
          .catch((err) => {
            console.error("请求失败:", err);
          });
      }
    });
  }
});
```

```

}

// 弹出提示信息
async function showMessage(msg) {
  await request("/api/notification/pushMsg", { msg, timeout: 3000 });
}

function getCurrentPage() {
  //获取当前屏幕
  const currentScreen = document.querySelector(".layout_wnd--active");
  //获取当前页面
  const currentPage = currentScreen.querySelector(
    ".fn_flex-1.protype:not(.fn_none)"
  );
  return currentPage;
}

//传入 node节点列表 arr和数据抽取函数 fliter。
// fliter 传入一个节点，返回一个字典
// 字典格式：
// {status,data}
// status 为 ok，则代表为抽取成功，将data压入返回列表anwer，并最后返回。
function iterArr(arr, fliter) {

  if (!arr && arr.length <= 0) {
    return [];
  }

  length = arr.length;
  anwer = [];
  for (let node of arr) {
    data = fliter(node);
    if (data["status"] === "ok" && data["data"]) {
      anwer.push(data["data"]);
    }
  }
  return anwer;
}
